

Given an array A of sorted integers and another non negative integer k, find if there exists 2 indices i and j such that $A[j] - A[i] = k$, $i \neq j$.

Input Format:

First Line n - Number of elements in an array

Next n Lines - N elements in the array

k - Non - Negative Integer

Output Format:

1 - If pair exists

0 - If no pair exists

Explanation for the given Sample Testcase:

YES as $5 - 1 = 4$

So Return 1.

For example:

| Input | Result |
|-------|--------|
| 3 | 1 |
| 1 3 5 | |
| 4 | |

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int main() {
4     int n;
5     scanf("%d", &n);
6
7     int A[n];
8     for (int i = 0; i < n; i++)
9         scanf("%d", &A[i]);
10
11    int k;
12    scanf("%d", &k);
13
14    int i = 0, j = 1;
15    int found = 0;
16
17    while (j < n) {
18        int diff = A[j] - A[i];
19
20        if (diff == k && i != j) {
21            found = 1;
22            break;
23        } else if (diff < k) {
24            j++;
25        } else {
26            i++;
27            if (i == j)
28                j++;
29        }
30    }
31
32    printf("%d\n", found);
33    return 0;
34}
35
```

| | Input | Expected | Got | |
